All Sections

Hey all, I’ve been running into a persistent issue while testing my MP2 submission. All of my public test cases are failing with the following message:

Invalid in-cache allocation: obj at 2280975824 is not in 2281017344

output for my first test case is
$ mp2
[SLAB] kmem_cache { name: file, object_size: 504 }
[SLAB] [partial slabs]
[SLAB] [slab 0x0000000087f4e000] { freelist: 0x0000000087f4ebd8, in_use: 1, nxt: 0x0000000000000000 }
[SLAB] [idx 0] { addr: 0x0000000087f4e200 }
[SLAB] [idx 1] { addr: 0x0000000087f4e3f8 }
[SLAB] [idx 2] { addr: 0x0000000087f4e5f0 }
[SLAB] [idx 3] { addr: 0x0000000087f4e7e8 }
[SLAB] [idx 4] { addr: 0x0000000087f4e9e0 }
[SLAB] [idx 5] { addr: 0x0000000087f4ebd8 }
[SLAB] [idx 6] { addr: 0x0000000087f4edd0 }
tp: 3, ref: 9, readable: 1, writable: 1, pipe: 0x0505050505050505, ip: 0x0000000080035578, off: 84215045, major: 1[SLAB] print_kmem_cache end

I really lost with this obj at 2280975824 is not in 2281017344 eror I will glad to have some help

Hello student,

This error message indicates that when initializing `kmem_cache`, you assumed the implementation includes in-cache fragmentation, but you did not actually implement it. As a result, the interpreter detected that you are not truly utilizing the in-cache slab, leading to the error. Please carefully review the printing requirements for `kmem_cache_create` and `print_kmem_cache` to adjust your implementation.
