[MP2] TODOs and Other files then slab

3

MEHMET EFE SAK (MEHMET EFE SAK)

All Sections

Hello
I have been struggling with the test cases over and over again, just to make things clear. Like in previous assignments, only modifying the **TODO** parts (i.e., only changing `slab.c` and `slab.h`) should be enough for the assignment, right? Because I have changed a lot of system files, I'm wondering if I might be doing something wrong.

Hi, if you're struggling with the printfslab() system call, you may refer to the implementation of TA's debugswitch() :D

I just copy the way it appears everywhere in kernel/ and Makefile, replace them with printfslab(), and it works. Hope this may help!!

Hi~

The files I modified are **file.c syscall.c syscall.h sysfile.c (slab.c slab.h)**

- **file.c:** Replace `ftable` with `struct kmem_cache *file_cache`

- **syscall.c syscall.h sysfile.c:** Implementing System Call `sys_printfslab`

I have already passed all public tests (including optimization tests), so I think above modifications are enough !

Hope this may help~

Hello student,

Thank you for the responses from both classmates. For this assignment, the teaching assistants allow students to modify any files outside of the restricted ones, including adding or removing code, which is mentioned in Spec. This is because we don't want students to adjust their code only after seeing a TODO. We believe this isn't a practice students should develop for future work or when tackling other open-source codebases. No one will list out all the TODOs for you.

When working with large-scale code projects like xv6 in this assignment, it's an opportunity to train your ability to track and understand code. For example, as classmate Cheng mentioned: you can directly refer to how others have done it in the past. The debugswitch implemented by the teaching assistants is one such example, and we're very pleased that students have noticed this simplest implementation of a system call.

I hope the above response addresses your questions. If you have more questions, please feel free to ask, or come discuss during the TA hours today or on Friday.

Tzu-Ching
