我想請問我執行./mp2.sh testcase之後出現了這個報錯，要怎麼解決呢？

```
chown: changing ownership of '/home/student/mp2/out/slab_check.out': Permission denied
chown: changing ownership of '/home/student/mp2/out': Permission denied
Warning: Failed to chown /home/student/mp2/out
```

我跟你遇到一樣的問題。我是用mac然後在colima之上跑docker（已解決）。以下供參：
https://stackoverflow.com/questions/67498836/docker-chown-changing-ownership-of-data-db-operation-not-permitted
(https://stackoverflow.com/questions/67498836/docker-chown-changing-ownership-of-data-db-operation-not-permitted)

For Mac user running Colima.

I had the same problem on Mac and it turns out it was a problem when using the default Colima settings. Changing the `vmType` to `vz` and `mountType` to `virtiofs`.

To fix this run:

1. `Colima delete`
2. `Colima start --edit` and update `vmType` and `mountType`

注意colima delete 會把之前載過的docker image清空。

想請問在mac這樣跑是正確的嗎？

./mp2.sh container start

./mp2.sh container bash

./mp2.sh testcase all

跑完以上三行 會出現下面這個錯誤訊息

"Failed to shutdown QEMU. You might need to 'killall qemu' or 'killall qemu.real'.

Warning: Failed to chown /home/student/mp2/out"

謝謝。

```
> ./mp2.sh container start
Starting 'mp2'...
b77f55d3ce4fb8f1f371d9d64e56df2a4c2a857e505ec5880ee6eee65b26283c
Container 'mp2' started.
Cannot chown, may not need to chown
> ./mp2.sh container bash
student@b77f55d3ce4f:~/mp2$ ./mp2.sh testcase all
== Test Slab check (Max [3(+5): slab structure (with bonus)] + [2: max objects]) (10%) ==
Failed to connect to QEMU; output:
